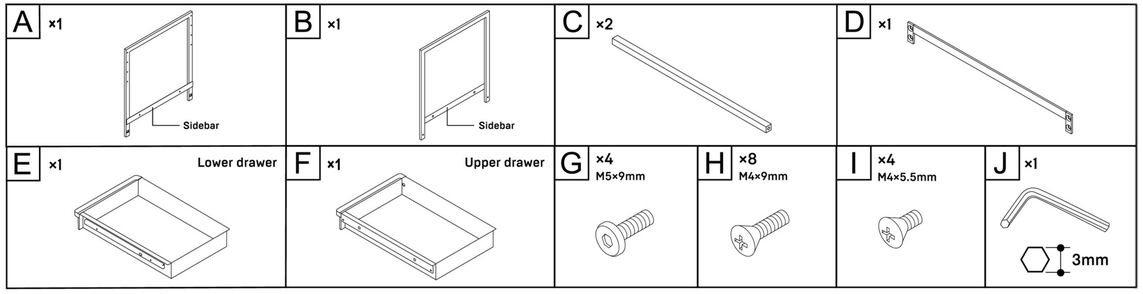
Tower Under-Sink Rack with Pull-Out Shelf

PRODUCT NUMBER	01460:WH 01461:BK

INSTRUCTIONS Thank you for purchasing this item from Yamazaki Inc. Please refer to the following instructions before using the product. Please use it properly, and take good care of it.

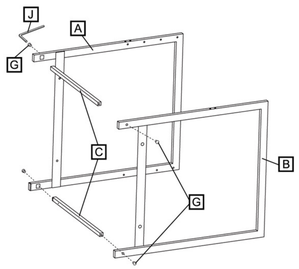
Important

***Please prepare a magnetic plus screwdriver, as some screws are located in recessed holes. If you find the screws difficult to tighten, try loosening the other screws slightly and gradually adjust the tightness of each screw.**

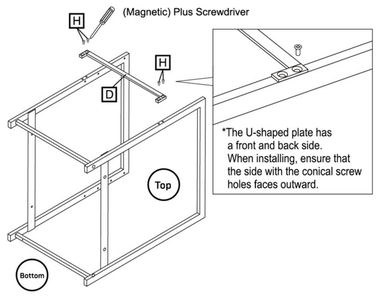


1 Place the two pipes between the left and right frame and secure them using the included screws and wrench.

*Please ensure the correct orientation of the frames.

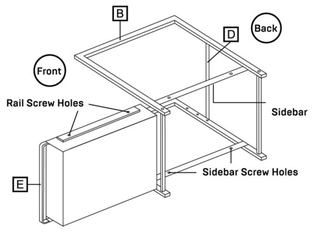


2 Using a screwdriver, attach the U-shaped plate with the longer plus screws, as illustrated in the diagram below.

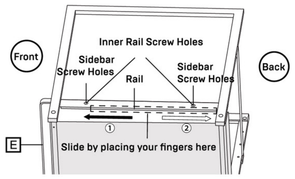


3 Place the product right-side frame facing up and carefully position the lower-level drawer between the sidebars.

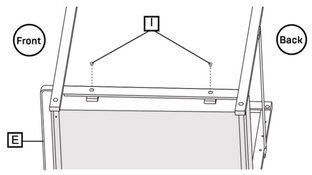
*Please exercise caution to avoid injury.



4 Align the screw holes on the sidebars and silver drawer rails. For better precision, place your thumbs underneath and slide from left (1) to right (2) until the holes are properly aligned.

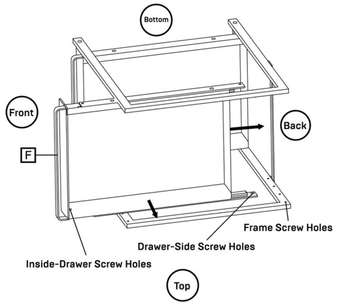


5 Secure the rail using the short screws and a plus screwdriver. Begin with the back hole (1), then proceed to the front hole (2). If the front screw holes are hard to align, try adjusting the drawer by shifting it up or down. Alternatively, you can slightly loosen the back screw (1) to make adjustments. Flip the frame over and repeat steps 4-5 to secure the opposite side.

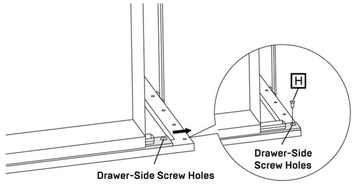


*Be careful when flipping the product over to prevent the drawer from sliding out.

6 Place the product with the top side facing you, as shown below. Set the top drawer at your desired height from the four available levels, paying attention to the front and back direction when installing.

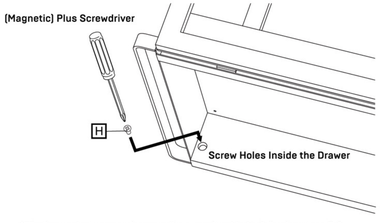


7 Fasten the drawer using the longer screws, beginning with the screw holes on the back side. To do this, slide the drawer forward slightly to expose the back screw hole, then secure it.



8 Slide the drawer back to align the holes inside the drawer with the screw holes underneath. Attach the screws to the tip of your magnetic screwdriver and secure them.

*Use a magnetic plus screwdriver, as the screw holes are in a deep place.
*If the screw holes are hard to see, use a light to illuminate them.



*Flip the product over and secure the opposite side by following steps 7-8.
*Be careful when flipping the product to prevent the drawer from sliding out.
