inöuqa

What 's the idea ?

Have you noticed children's lack of imagination? The amount of time spent on screens? The motor inactivity? The overconsumption of toys?

That's what we thought...

These observations are the starting point for **inöuqa**: to create an innovative, modular, life-size building toy designed to stimulate children's imagination, motor skills and autonomy.

Ultra-light, secure units that can be assembled endlessly, as if by magic. A simple, intuitive game. Inclusive too, adapted to all profiles.

According to your desires and inspirations, **inöuqa** will take the shape of a hut, a rocket, a boat, a castle, an airplane... perfect to live extraordinary travel adventures...

A toy as giant and magical as their creativity!

Learn more...

Benefits

- imagination
- autonomy
- motor skills
- inclusion
- safety

Instructions

so easy!

Simply place one connector in front of the other to activate the magnetism and assemble your units.

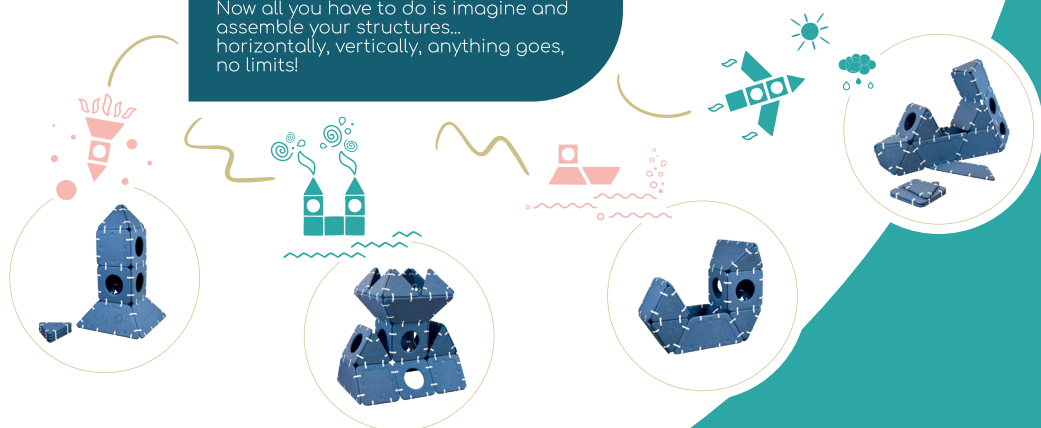

1 friend at a time ...

Connectors work best in pairs! Two connectors already assembled together will not be able to connect with a third.

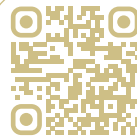

let's play!

Now all you have to do is imagine and assemble your structures... horizontally, vertically, anything goes, no limits!

Inspiration

Need ideas?

At inöuqa, we have decided not to offer instructions for use.

We believe that this would be contrary to the freedom of creation and a restriction for the imagination of children.

But it's true that sometimes, to get started, a little help may be necessary...

magnetic connection

ultra-light units

easy to clean

easy to store ...

⚠ — « Warning! Recommended 3-9 years old » • « Warning! For indoor and family use only »

Do not attempt to open connectors with dangerous and/or inappropriate objects • If a connector is opened and damaged by deliberately dangerous and/or inappropriate behavior, and the magnet becomes inadvertently accessible, do not swallow the connector or magnet • Do not climb on units once they have been assembled into various constructions; the structures are likely to collapse • Do not throw the units at other people around, to avoid injuring them. Do not walk on units piled or stacked on top of each other, as this could potentially break them • Indoor use is preferable for better structural stability and longevity of connectivity • Do not leave units outdoors to avoid wear and tear, and the accumulation of parasitic matter in the connectors • Clean with a little water, soap and a sponge or cloth • Do not immerse modules in water, as this may cause wear and loss of connectivity • Keep assembly and installation instructions for future reference • Replace defective components in accordance with the manufacturer's instructions •
