

imagine and build to grow!

Much more than a toy!

Lack of imagination? Screen time? Motor inactivity ?
Overconsumption of toys? You too have noticed these trends among our children...

These observations were the starting point for **inöuqa** : to create an innovative, modular, life-size construction game to stimulate imagination, motor skills and autonomy.

Ultra-light and secure units that can be assembled endlessly, as if by magic. A simple, intuitive and inclusive game, suitable for all profiles.

According to your desires and inspirations, **inöuqa** will become a hut, a rocket, a boat, a castle, an airplane... ideal for great travel adventures!

When we conceived **inöuqa**, we thought of it above all as a useful and relevant educational solution, adapted to children's places and professionals. Because we know the challenge of managing children and/or groups on a daily basis...

At your side, we try to contribute in a relevant way.

Now it's your turn!
