

Dynamic Dumping Containers

The Easier and Faster Solution for a Smart Waste Management

Effortless Emptying

Trigger the mechanism, unload, and wait for it to return to the starting position. The new assisted automatic dumping system reduces unloading time by 10%, making it quicker and more efficient.

Built to Last

Constructed from premium folded sheet metal with reinforced edging and a durable powder-coated finish, this container is built for long-term, heavy-duty performance.

Maximizes Efficiency

Spending less time emptying means more cycles per day, boosting productivity. These customizable containers are designed to accommodate various scrap types and industries, ensuring maximum efficiency.

Guaranteed Safety

The automatic tipping mechanism reduces the need for operator intervention, ensuring safe operation in all conditions.

Dynamic Dumping Containers

Effortless Emptying

The new assisted automatic dumping system eliminates the need for pulling ropes, bumping, or operating forks, enabling effortless management of the skip's emptying and return to its correct position.

The automatic emptying mechanism is activated by a spring-loaded pressure plate, allowing for effortless and secure emptying directly from the driver's seat, even at significant heights.

Built to Last

Automatic tipping mechanism prevents dents in the structure, greatly reducing maintenance work and exposure of the metal to rust.

Engineered for rigorous applications, designed to handle various scrap materials across multiple industries.

Featuring a durable powder-coated finish, providing enhanced strength and exceptional resistance against corrosion, weathering, and the demands of everyday use.

Maximizes Efficiency

Reducing emptying time allows for more cycles throughout the day, enhancing productivity and efficiency.

Excellent maneuverability is achieved through the 'ALL IN' philosophy, which keeps every component of the drive system within the footprint, ensuring easier handling in tight spaces.

The detachable tank design allows multiple products to be shipped in a single delivery, while its stackable feature enables both tanks and bases to be stored vertically when not in use, maximizing space efficiency.

Guaranteed Safety

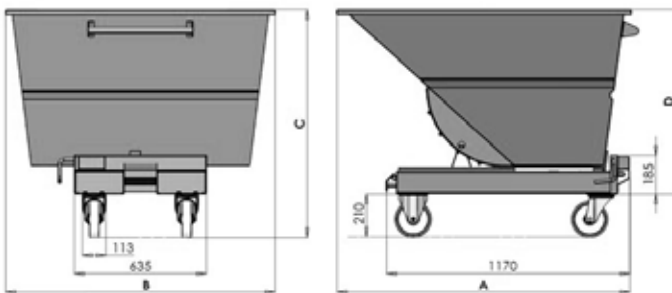

The assisted automatic tipping system ensures maximum safety for the operator, who does not have to intervene in emptying operations.

The safety chain, fitted as standard, eliminates any risk of the container slipping or moving during operation.

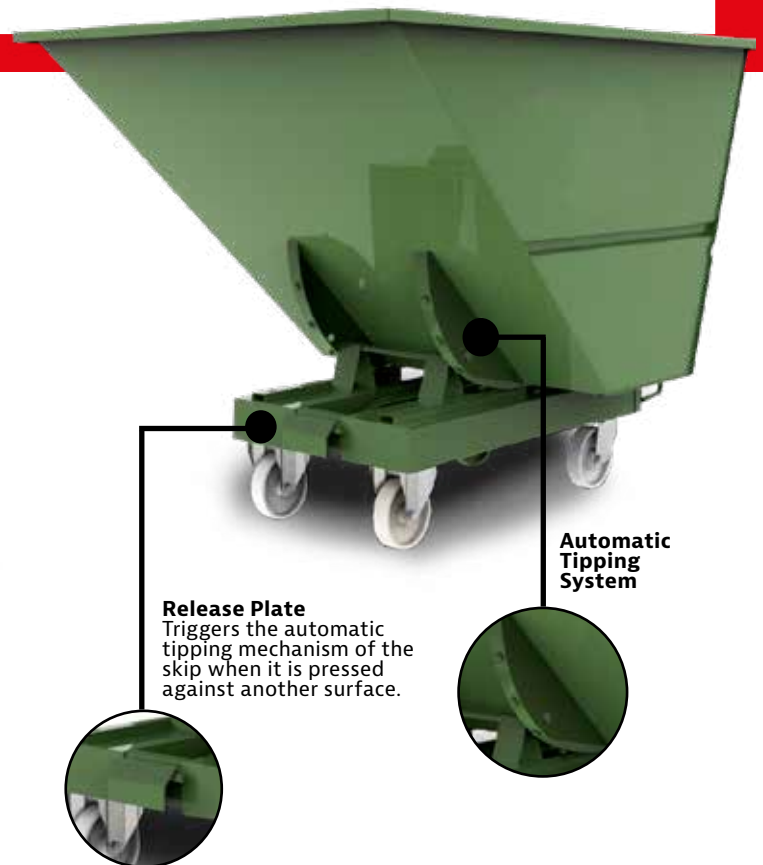

The handle on the base of the container allows for manual emptying if or when necessary.

Standard Sizes

Model	Dimensions (mm)				Capacity (kg)	Volume (L)
	A	B	C	D		
SDC 550	1400	1000	1100	890	550	550
SDC 750	1400	1300	1100	890	750	750
SDC 1000	1570	1300	1250	1040	1000	1000
