## Lifting force tables 803

Fig. 1: Lifting force table 803

A	Outreach from center of rotating ring
B	Height

All table values are specified in kg (lbs.), in a horizontal position on firm even ground as well as without a bucket or an attachment. Base of calculation: according to ISO 10567.

Set pressure at the lifting arm cylinder: 17,000 kPa (2,466 psi)

The lifting force of the vehicle is limited by the hydraulic output or by the tilting safety mechanism.

Neither 75% of the static tipping load nor 87% of the hydraulic lifting force are exceeded.

The lifting capability applies under the following conditions:

- Lubricants and operating materials at the prescribed levels.
- Full fuel tank.
- Vehicle at operating temperature.
- Weight of the operator: 75 kg (165 lbs.).
