Extension Truck

Extension Truck

Adjust the truck to the load

The transport of extension material can be both difficult and time-consuming. The problem is not just the "overhang", that in itself is a safety risk, but also the high weights which can cause deformation and damages to the material.

Starke Arvid´s Extension Truck is a truck that with a

simple hand grip can be extended up to 1200 mm. The Extension Truck is perfect for its purpose and since the adjustment of the truck is done without causing overhang, a minimum of space is required when it is not in use. The Extension Truck is available in two models, with or without divided platform.

Draw handle with loading boss and draw hooks

Removable load supports

Weather-proof plywood

Sliding length adjustment in five positions
Car steering

Handle for length adjustment
