

PALAX®

D270 active

A SMALL UNIT WITH HIGH CAPACITY

The smallest member of the renewed Palax chain saw range makes processing of firewood effortless and fast at a competitive price.

Even if the Palax D270 Active is small to the external dimensions, it is handy and effective when it comes to the processing of firewood. The protective net, which opens up completely, makes the maintenance easy, and the in-feed rollers for the logs make handling of the log lighter. Either a tractor, a combustion engine or an electric motor can be selected as the power source of the machine. The machine's 4-ton cylinder guarantees that the splitting force is more than sufficient for consumer use. Cutting is affected by means of a 13" saw-bar and a chain-saw. A skilful saw operator is able to sharpen the chain himself without suspending the work with any unnecessary standstills.

The D270 Active is not at all picky in terms of working environment or the location of the work site. As it is easy to transfer, it follows the workman to wherever he goes. Platforms for transportation on and off the road are available as an option.

FEATURES

- Hydraulic chain saw power transmission
- Automatic saw chain lubrication
- Log presser
- Cutting length adjustment
- Automatic log splitting
- Firewood out-take trough

ACCESSORIES

- Hydraulic discharge conveyor 2,6 m
- Skid-steer loader adapter
