#### WARRANTY POLICY

JET EQUIPMENT AND TOOLS LTD. (JET®) makes every effort to ensure its products are manufactured to the highest standards and are guaranteed against defects in materials and workmanship when the product is used for the purpose for which it was designed.

This guarantee applies only to JET products purchased new from a JET authorized distributor.

JET product warranties are extended to the original retail purchaser only. This warranty does not apply to any product showing signs of abuse, misuse, alteration, or having been improperly maintained or repaired.

This warranty does not cover damage attributable to normal wear and tear.

Any JET product that fails during normal use and is within the specified warranty period for that product will be repaired or replaced at JET's discretion. Repairs and/or replacements are warranted as described for the specific product and only for the remainder of the original warranty period.

Repair or replacement is the exclusive remedy for defective product under this warranty.

Warranty is expressly in lieu of all other warranties, including the implied warranty of merchantability or any implied warranty of fitness for a particular application.

Any JET product for which there is a warranty claim should be returned PREPAID to an authorized JET distributor or service centre. Authorized Warranty Depots are found at surewerx com

ALL warranty claims must be accompanied by proof of purchase and an explanation of the defect or failure. It is the customer's responsibility to provide this information.

JET shall not be held liable for any consequential or incidental damages for breach of any expressed or implied warranty on their products. No claims for damages of any type will be considered and all products are sold with this understanding.

Any costs incurred to obtain warranty consideration or services are the Customer's responsibility including shipping and handling, travel, lost time, or lost production.

## SPECIFIED WARRANTY — MATERIAL HANDLING

#### 1 Year Limited Warranty

Pallet Trucks Mobile Lift Tables
Winches

#### **GENERAL INFORMATION ON JET CHAIN HOISTS AND PULLERS**

**Customs Lifts** — Custom lift lengths are available, however, custom lift hoists and pullers are NOT returnable.

**CAUTION:** Be sure that supporting structures and load-attaching devices used in conjunction with hoists, provide an adequate safety factor to handle the rated load plus the weight of the equipment. If in doubt, consult a qualified structural engineer.

This equipment is not to be used for lifting, supporting, or transporting people, or lifting, supporting, or transporting loads over people.

**IMPORTANT:** Before installation and operation, see maintenance and operations manual for additional warnings, precautions and operating instructions.

NOTE: Batteries supplied with certain products may have been subjected to long shelf life, resulting in low energy or a dead battery. Please source replacement batteries locally. Please follow instructions in the manuals for products using rechargeable batteries. Dead batteries do not constitute a warranty claim.

#### **WARNINGS**

- 1. Read and understand the entire owner's manual before attempting assembly or operation.
- Read and understand the warnings posted on the machine and in this manual. Failure to comply with all of these warnings may cause serious injury.
- Replace the warning labels if they become obscured or removed.
- 4. This chain hoist is designed and intended for use by properly trained and experienced personnel only. If you are not familiar with the proper and safe operation of a chain hoist, do not use until proper training and knowledge have been obtained.
- Do not use this chain hoist for other than its intended use. If used for other purposes, JET Equipment & Tool (JET®). disclaims any real or implied warranty and holds itself harmless from any injury that may result from that use.
- 6. Do not install this chain hoist where explosive hazards may exist.
- 7. Give your work your undivided attention. Looking around, carrying on a conversation and "horse-play" are careless acts that can result in serious injury.
- 8. Do not use to lift people or loads over people. Warn others in the vicinity when lifting or transporting a load. Avoid swinging load and hook.
- 9. Do not exceed the rated capacity of the chain hoist.
- Make sure limit switches are operating properly. Do not use limit switches as routine operating stops; they are emergency devices only.
- 11. Do not use the load chain as a sling; this may cause damage to the chain.
- 12. Maintain firm footing when operating the hoist.
- 13. Always inspect the chain hoist for damage prior to use. Do not use a chain hoist with twisted, kinked, worn or otherwise damaged chain. If the chain hoist is damaged, do not use until it has been repaired or replaced.
- 14. Do not use more than one chain hoist to lift or move a load. If this is unavoidable, each chain hoist must have the same capacity as the load to be moved.

- Never allow the load chain to "set" over sharp edges.
   All lifts must be made with straight chain that is free of obstacles.
- Do not use a chain hoist unless load is centred between top and bottom hooks.
- Protect load chain from weld splatter and other contaminants. Do not allow the hook or chain to be contacted by a live welding electrode.
- 18. Always take time to study the job to be performed and choose the safest method. Do not place yourself or other people in an unsafe position.
- Leave all internal maintenance to a qualified JET Equipment & Tools LTD (JET®) service centre.
- 20. Replace the chain with factory replacement chain only. Do not use any other type of chain.
- 21. Never use the chain hoist if either hook is stretched, deformed, or has a broken or missing safety latch. Always replace the safety latch and/or the hook before placing the chain hoist back into service.
- 22. Do not operate this hoist while tired or under the influence of drugs, alcohol or any medication.
- 23. Understand and follow all procedures as set forth in American National Standards titled "Performance Standard for Hand Chain Manually Operated Chain Hoists." ANSI/ASME HST-2M. This standard is available through the American Society of Mechanical Engineers, 345 East 47th St., NY, NY 10017.
- 24. Do not use in wet, damp, or poorly lit locations. This hoist is not rated for outside use.

Familiarize yourself with the following safety notices used in this manual:

**A CAUTION** This means that if precautions are not heeded, it may result in minor injury and/or possible machine damage.

**AWARNING** This means that if precautions are not heeded, it may result in serious or even fatal injury.

#### INTRODUCTION

This manual is provided by JET Equipment & Tools LTD (JET®), covering the safe operation and maintenance procedures for a JET Electric Chain Hoist. This manual contains instructions on installation, safety precautions, general operating procedures, maintenance instructions and parts breakdown. This machine has been designed and constructed to provide years of trouble-free operation if used in accordance with instructions set forth in this manual. If there are any questions or comments, please contact either your local supplier or (JET®).

#### **DESCRIPTION**

JET, JEH electric chain hoist models comply with CUL and ANSI B30.16 standards and are available in single-speed, 115V/230V single phase or 230V/460V three-phase electrical configurations.

All JET® Electric Chain Hoists are available in custom configurations and can be modified to meet your required lift lengths. Contact your local dealer or JET® for more information.

**AWARNING** Read and understand the entire contents of this manual before attempting set-up or operation! Failure to comply may cause serious injury.

#### UNPACKING

Open the shipping container and check for shipping damage. Report any damage immediately to your distributor and shipping agent. Do not discard any shipping material until the Chain Hoist is installed and running properly.

Missing parts, if any, should be reported to your distributor. Read this owner's manual thoroughly for assembly, maintenance, and safety instructions.

#### **Contents of the Shipping Container**

- 1 Electric Chain Hoist
- 1 Chain Container with Bracket and fasteners
- 1 Power Cord
- 1 Pendant Cord
- 1 Top Hook Assembly
- 1 Owner's Manual
- 1 Load Test Certificate

#### **INSTALLATION**

Support for the hoist may be a hook, clevis pin, trolley, or beam clamp. Whatever method of suspension is chosen, the support components must be rated equal to, or greater than the capacity of the chain hoist. Supporting structures (such as I-Beams, etc.) should be installed by properly licensed professional installers.

#### **Installing Top Hook**

- Remove the two screws, lock washers and flat washers (A, Figure 1), the hook-pin plates (B) and the hook pins (C).
- 2. Place the top hook assembly (D) into position between the body plates, and re-install pins, hook-pin plates, screws, and washers. Firmly tighten the screws.
- 3. Place the hoist assembly into position on the supporting structure.

If you are using the hoist with a trolley, refer to the trolley manual for instructions on securing the pendant cord and maintaining proper slack in the cord during operation.

#### **Installing Power and Pendant Cords**

**NOTE:** If you need to convert the voltage requirements of the hoist, it will be more convenient to do that now before installing the power cord or pendant cord. See "Voltage Conversion" on page 9.

 Attach the power cord and pendant cord to the cable holder, as follows:

Figure 1

Figure 2

Figure 3

- 2. Open the connector caps on the two female connectors (Figure 2) and two male plugs (Figure 3).
- Check the orientation of notches on the female connectors and male plugs, correctly insert the 4p plug into the 4p female connector on the left and insert the 7p plug into the 7p female connector on the right with sufficient force (see Figure 3).
- 4. Tighten the two cover nuts with fingers (see Figure 4).

Figure 4

#### **ELECTRICAL INSTRUCTIONS**

AWARNING Electrical connections must be made by a qualified electrician in compliance with all relevant codes. This machine must be properly grounded to help prevent electrical shock and possible fatal injury.

#### Grounding

In the event of a malfunction or breakdown, grounding provides a path of least resistance for electric current to reduce the risk of electric shock.

This machine's power cord must be fitted with an appropriate UL/CSA listed plug, or it can be "hard-wired" directly to a control panel. If hard-wired, make sure a disconnect is available for the operator.

If a plug is installed, it must have an equipment-grounding conductor and a grounding prong. The plug must be plugged into a matching outlet that is properly installed and grounded in accordance with all local codes and ordinances. Do not modify the plug — if it will not fit the outlet, have the proper outlet installed by a qualified electrician.

Improper connection of the equipment-grounding conductor can result in a risk of electric shock. The conductor with insulation having an outer surface that is green with or without yellow stripes is the equipment-grounding connector.

If repair or replacement of the electric cord or plug is necessary, do not connect the equipment-grounding conductor to a live terminal.

Check with a qualified electrician or service personnel if the grounding instructions are not completely understood, or if in doubt as to whether the tool is properly grounded.

Repair or replace damaged or worn cord immediately.

#### **Voltage Conversion**

The **single-phase JEH models** are designed for 115-volt or 230-volt operation. They are pre-wired for 230 volts. To change to 115V proceed as follows:

- 1. Disconnect the hoist from the power supply and unplug the power cord and pendant cord from the hoist
- Remove the motor cover and move the plug from the 230V socket to the 115V socket.
- 3. Re-install the motor cover.

The **three-phase JEH models** are designed for 230-volt or 460-volt operation. They are pre-wired for 460V. To change to 230V proceed as follows:

- Disconnect the hoist from the power supply and unplug the power cord and pendant cord from the hoist.
- Remove the motor cover and move the plug from the 460V socket to the 230V socket.
- 3. Re-install motor cover.

Refer to the diagrams at the back of this manual for any clarification of these procedures.

**NOTE:** When connecting plug to socket, check that the connector notch is fully engaged. To remove a plug, press on the notch tail to disengage notch.

#### **Inspecting Hoist Motion**

- Before closing the circuit breaker and testing the hoist, check that wiring has been completed. If the hoist cannot be observed when the circuit breaker is closed, station an observer within sight of the hoist to report any movement when power is applied to the hoist. Be prepared to disconnect power if hoist motor starts when the power is applied. The hoist must remain motionless when power is applied. Find and correct any problems before continuing.
- With no load on the load hook, press the UP button very briefly and observe hoist action. The hook should move upward.
- 3. If no motion occurs when the UP button is pressed and the hoist is connected to a three-phase power supply, the power supply wires are incorrectly positioned. Switch any two of the three supply wires at the power source. Do not attempt to rewire the hoist circuit or pendant controls for this problem. Use the same safety precautions when

- reversing two of the supply wires as was used when the wires were originally connected.
- Re-connect power and test hoist movement again without load. Run hoist to the complete lifting height to ensure limit switches are operating properly.

#### **Extension Cords**

If an extension cord is necessary, make sure the cord rating is suitable for the amperage listed on the hoist's motor plate. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating.

The chart in Figure 5 shows the correct size cord to use based on cord length and motor plate amp rating. If in doubt, use the next heavier gauge. The smaller the gauge number, the heavier the cord.

#### **Recommended Gauges (AWG) of Extension Cords**

	Extension Cord Length*										
Amps	25 feet	50 feet	75 feet	100 feet	150 feet	200 feet					
< 5	16	16	16	14	12	12					
5 to 8	16	16	14	12	10	NR					
8 to 12	14	14	12	10	NR	NR					
12 to 15	12	12	10	10	NR	NR					
15 to 20	10	10	10	NR	NR	NR					
21 to 30	10	NR	NR	NR	NR	NR					

<sup>\*</sup>Based on limiting the line voltage drop to 5V at 150% of the rated amperes.

NR: Not Recommended

Figure 5

#### **Installing Chain Container**

Your hoist is supplied with a canvas chain container (Figure 6) designed to fit the particular length of chain. If a different length chain is ever installed on this hoist, the chain container must be replaced by one of proper size. See chart on page 19.

AWARNING Do not overfill chain container. If the chain should overfill and begin to fall, the entire chain container may empty without warning, resulting in serious personal injury or property damage.

To assemble the chain container to the hoist:

- Hang hoist in position on the I-Beam or trolley. Do not install the chain container yet. Allow slack side and load side of chain to hang freely from the hoist.
- 2. Apply power to the hoist and press the DOWN button until the lower limit switch is tripped.

- 3. Check the chain container to ensure that the seam is inside the bag. The bag must not be inside out.
- Insert bracket prongs into interior bag slots (Figure 6) as far as they will go.

Figure 6

- 5. Push the bracket down into the bag making sure the flaps are raised (Figure 7).
- 6. Push the flaps over and down until they are secure (Figure 8)

Figure 7

Figure 8

- 7. Remove the screw and washer holding the end chain to the hoist (Figure 9). Mount the bracket of the chain container in that location as shown in Figure 10.
- 8. Put the chain stop into the container (Figure 10) and operate the hoist to bring the load hook up until the upper limit switch is tripped.
- 9. Check the chain to ensure that all the non-loaded chain is completely in the container.

**A CAUTION** Do not put chain into the chain container by hand! By not following the above steps, the chain can become twisted or kinked and can damage the hoist.

#### PRE-OPERATION INSPECTION

#### Inspecting the Load Chain

Clean the chain with a solvent and carefully inspect the entire load chain. Replace damaged chain before using the chain hoist. See "Inspection Procedures: Allowable Limits" on page 17 for the maximum pitch allowed for chain length. If the chain exceeds this amount, it must be replaced.

Figure 9

Figure 10

Also replace the load chain if any of the following are identified:

- 1. Seriously rusted or cracked.
- Marks on the chain surface are deeper than 5% of the link's diameter.
- 3. Links are twisted or deformed.
- The links are stretched too long or seriously worn on the surface, especially at the points where links contact each other.

Never extend load chain by welding a second piece to the original.

A WARNING

Do not operate the hoist with a twisted, kinked, or damaged load chain.

Do not splice the load chain.

Check that the chain does not twist along its length from hoist to hook. If twist is present on units with multiple falls, the hook must be passed back through the chain loop to remove all twists in the chain.

AWARNING

The load chain supplied with your JET®

JEH chain hoist is designed, manufactured, and tested for proper fit and durability. Over a period of time, the chain may need to be replaced. For your own safety, use factory replacement chain only. Use of other than factory replacement chain may cause serious injury and/or damage to the hoist.

A light coat of 30-weight oil applied periodically to the chain will create easier operation and prolong the life of the chain.

#### Inspecting the Hooks

It is important to check top and bottom hooks for proper opening and other signs of deformation or damage. Replace a hook immediately if any of the following problems are identified:

- 1. The safety latch no longer contacts the hook opening.
- The vertical angle at the neck of the hook reaches 10° (see Figure 11).

Figure 11

- 3. Chemical corrosion or cracks on the hook.
- 4. Excessive wear on the inside surface.
- 5. The throat opening has enlarged. (See page 17 for the maximum allowable limits for the throat opening.)

**NOTE:** Excessive hook throat opening or twist indicates abuse or overloading of the hoist. If such deformation

is discovered, inspect hoist, chain and all supporting members very carefully for additional indications of excessive hoist loading.

AWARNING Do not attempt repair of a hook by heat treating, bending or attaching anything by welding. Such procedures will weaken and may cause failure of the hook.

#### **OPERATING THE HOIST**

Allow the hoist to come to a full stop before changing direction. Rapidly reversing or catching a falling load can overload the hoist system and cause a failure in the hoist and/or chain, resulting in injury or property damage.

If the hoist is connected to a manual trolley, move the hoist by pushing on the suspended load. Move an unloaded hoist by pulling on the empty hook. Do **NOT** move the hoist by pulling on the pendant cord.

The brake mechanism must be kept clean and free from dirt, water, and oil. Never allow oil to penetrate the brake mechanism. Always keep your hoist clean, and store in a clean, dry location.

Follow this general procedure for hoisting loads:

- 1. Secure the upper hook to the supporting structure.
- Place load sling or chain in the centre of the bottom hook, making sure the safety latch is secure. Never load the hook in front of the safety latch. See Figure 12.
- Avoid lifting one load with two hoists. If this is unavoidable, apply equal weight to both hoists and use hoists with the proper lift capacity. Capacity of each hoist must be equal to the total load to be lifted.

Figure 12

- 4. Press the UP button and remove all slack in the load chain. Increase tension in the load chain until the hoist is about to raise the load.
- 5. Check again that the load is properly slung, directly under the hoist, and will not suddenly swing or twist.
- Raise the load an inch or two above the ground and stop. Observe load for a few moments, looking for signs that the load or hoist system is unstable, or other indications that there is a problem.
- Check that the chain is not twisted at the bottom hook.
   All welds should face the same direction (see Figure 14).
   For hoists with two or more falls of chain, make sure the bottom hook is not turned over. This may cause the chain to twist.
- 8. Raise load to the travelling height. Raise only to the height necessary to safely clear all obstacles.
- Lower load at destination. If both UP and DOWN
  commands must be used during lowering, pause for a
  moment between each reversal of load direction.
- 10. Slowly allow weight to shift from hoist to ground or new support. Do not approach load until all tension is out of the chain and the load is stable.

#### **ADJUSTMENTS**

#### Safety Clutch Adjustment

The load limit of the safety clutch has been set to within 1.3 to 1.8 times the rated load of the hoist. Generally, the safety clutch will not require adjustment. But if the hoist ever fails to lift the rated load while the rotor is turning, the safety clutch must be re-adjusted. Proceed as follows (see Figure 13):

- 1. Suspend the rated load in the bottom hook.
- 2. Push the UP button to create tension on the load chain, but do not raise the load off the ground.
- Disconnect the power source and remove the gear side cover.
- 4. Loosen the screw (G), open the plate (J), and push down the adjusting shaft (K) until it fully engages the adjusting circle nut (L). Rotate the nut (H) clockwise to tighten the adjusting circle nut (L).
- 5. Pull the adjusting shaft (K) out of engagement with the adjusting circle nut (L). Then close the plate (J) and tighten screw (G).
- Connect hoist to power source and push the UP button on the pendant control. The hoist should now lift the rated load. If it will not lift the load, disconnect power and repeat steps 4 and 5 to tighten the adjusting circle nut until it can lift the rated load.
- 7. Now change the load to within 1.3 to 1.8 times the rated load, then push the UP button. The hoist should NOT be able to lift the load. If it can lift the load, repeat steps 4 and 5, rotate the adjusting nut (H) and loosen the adjusting circle nut (L) until the hoist cannot lift the load.
- 8. Unload the hoist and repeat step 6 with the original rated load. The hoist should now be able to lift the original rated load. If it does not, repeat steps 6 and 7 until the hoist operates with the rated load only, but not with the 1.3 to 1.8 times rated load.
- 9. Unload the hoist and re-install the gear side cover.

#### **Replacing Load Chain**

Over time, the load chain will wear or elongate. This can cause damage to the hoist, breakage, or non-engagement of the load sheave. The following procedures describe replacing the load chain for single and multiple fall hoists. These procedures should be performed by experienced

These procedures should be performed by experienced personnel only.

#### **How to Cut Chains**

Use a bolt cutter with special cutter jaws for cutting hardened chain. Cut only one side of the link at a time. When making the second cut, place a mat over the chain to catch the flying chain section.

A — Spline hub

B — First stage pinion

C — Adjusting washer

D — Dish spring

E — Clutch friction

F — First stage gear

G — Screw

H — Adjusting nut

J — Adjusting plate

K — Adjusting shaft

L — Adjusting circle nut

M — Clutch carrier

Figure 13

#### Making a C-Link

Replacing load chain will require the use of a C-link (in some cases, two C-links), which you can easily make as follows:

- 1. Cut a link from the old chain.
- Cut the weld from the link leaving an opening approximately 1.25 times the diameter of the link material. See Figure 14.
- 3. Grind the cut areas smooth and remove all burrs.

Figure 14

#### Single Fall Chain Hoist

- Lower the load hook until only 1 to 2 feet of slack chain remains in the chain container.
- 2. Remove chain container.
- On the slack side of the chain, remove the chain stop and the spring (Figure 15). Keep these handy for later re-installing.
- 4. Using a C-link, connect the new chain to the old chain. Be sure vertical link welds face away from load sprocket (see Figure 16).
- Keep tension on both sides of the chain and lower the load hook to pull the new chain through the hoist.
   Do not let the chain twist or bind as it is being pulled through the hoist.

Figure 15

- 6. Stop hoist when 1 to 2 feet of new chain remains on the slack side.
- 7. Install the spring and chain stop on the slack end of the chain.
- 8. Remove the load hook and the spring from the old chain and install them on the new chain. Inspect the condition of both spring and hook.
- Lower load hook until the limit switch stops hoist movement. Inspect the chain for any signs of twist.
- 10. Install the chain container following the instructions in this manual. Do not fill the chain container by hand.
- 11. It is recommended that after installing new chain the first few lifts be limited to no more than 25–50% of the rated load. Thoroughly Inspect the chain for twist before placing hoist in routine service.

#### **Vertical and Horizontal Links**

Vertical and horizontal are determined from the relationship with the load sprocket. Vertical links will be guided by the centre slit in the load sprocket. Horizontal links will engage in the oval pockets on the sprocket. See Figure 16.

Figure 16

Figure 17

#### **Dual/Multiple Fall Chain Hoists**

**A CAUTION** The link on the load side end must be a vertical link. If it is a horizontal link, the chain will have a twist in it.

- Lower hook until only 1 to 2 feet of slack chain remains in the chain container.
- 2. Remove chain container.
- 3. On the slack side of the chain, remove the chain stop, and remove the black spring(s). (see Figure 15). Keep these handy for later re-installing.
- 4. Using a C-link(s), connect the new chain to the old chain. If the end link of the old chain is horizontal, use two C-links. If the end link of the old chain is vertical, use one C-link See Figure 18. Using the correct number of C-links will properly orient the chain and ensure that the first link on the load side end is a vertical link.
- 5. Install the spring(s) and chain stop on the opposite end of the new chain.
- Support the load hook so that the load chain can pass through the chain sheaves smoothly. Figure 17 shows the load chain path for the various sizes of hoists.
- Press the DOWN button to move the chain through the hoist. Keep tension on the chain as you pull it through to the load side until the C-link(s) clears the hoist at the load side.

Figure 18

- 8. Place the first link of the new chain into the load side end holder. Be sure that there is no twisted chain between the last chain sprocket and the load side end holder.
- Remove the chain stop bolt from the old chain and install it on the new chain. Do not substitute any other bolt in this application. Use a new cotter pin to secure the bolt.
- 10. Install the chain container following the instructions in this manual. Do not fill the chain container by hand.

- Lower hook until limit switch stops hoist movement, then raise hook until limit switch stops hoist movement. Inspect chain for any signs of twist and correct before continuing.
- 12. It is recommended that the first few lifts be limited to no more than 25-50% of the rated load. Inspect chain for twist before placing hoist into routine service.

#### **Brake Adjustment**

The normal gap between the armature and the iron core is from 0.5 mm to 1.0 mm. If the gap is out of the range of 0.5 mm to 1.0 mm, it must be adjusted as follows (see Figure 19):

- 1. Disconnect the hoist from the power source.
- 2. Remove the gear side cover.
- 3. Remove the locking plate (H) by unscrewing the four screws (J).
- 4. Insert a 0.5 mm spacer between the iron core (K) and the armature (B).
- 5. Tighten the four nuts (G) by an equal amount one by one. The gap is now adjusted to 0.5 mm.
- 6. Release the four nuts (G) by 1/6 of a turn and remove the spacer. Re-tighten each of the nuts by 1/6 of a turn.
- Re-position the locking plate (H) and install the four screws (J).
- 8. Re-install the gear side cover.

**NOTE:** When adjusting the brake, if the brake pad is found deformed, the glue has failed, or the lining is severely worn, the brake pad should be replaced. See page 18.

Figure 19

#### INSPECTION AND MAINTENANCE

**AWARNING** All repairs and adjustments are to be performed by trained and experienced personnel using procedures that are approved for the hoist system being serviced. All safety-related deficiencies discovered in the inspection are to be corrected before the hoist is placed back in service. Check for internal damage whenever external damage has occurred.

Read and follow the ANSI Inspection and Maintenance instructions. Know the meaning of Frequent Inspection, Periodic Inspection, Normal Service, Heavy Service, and Severe Service. It is the customer's responsibility to understand and follow all ANSI and this inspection and maintenance instructions.

The following items are to be inspected by appointed personnel at the time interval noted below. Dated inspection and repair reports must be maintained. Copies of all reports must be available to service personnel.

#### Inspection Schedule A

Service Interval:

Normal Service — Monthly
Heavy Service — Weekly to Monthly
Severe Service — Daily to Weekly

- 1. Check brake for slippage.
- 2. Check that pushbutton controls operate properly.
- Check that limit switches function properly. Without load, operate the up-button control while observing stopper spring. If stopper spring becomes compressed and motor does not stop, STOP operation immediately. The limit switch is not operating properly. Repeat test with down button control.
- 4. Check top hook and load hook for deformation, chemical damage, and cracks.
- 5. Check that the load chain is clean and lightly lubricated, free of excessive wear or deformation at the contact points between links and link and hook. This hoist uses a special alloy hoisting chain and does not interchange with any other manufacturer. All replacement chain must be purchased from your JET® distributor or JET Equipment & Tools LTD.
- 6. Check that the chain passes through all sprockets smoothly while under load.
- 7. Check the entire hoist system for signs of damage and loss of integrity.

#### Inspection Schedule B

Service Interval:

Normal Service — Yearly
Heavy Service — Semi-Annually
Severe Service — Quarterly

- 1. Do all Schedule A items.
- Check the entire unit for loose screws, bolts, nuts, and pins.
- Check for evidence of excessive wear, corrosion, cracks, or distortion in the following parts: hook parts, chain attachments, suspension bolts and shafts, gears, bearings, pins, rollers, and locking and clamping devices.
- 4. Check for evidence of damage to hook parts including hook retaining nuts and collars and pins and hook holding frame and parts used to secure the frame.
- Check for evidence of damage or excessive wear of load gear, sheave and sprocket wheel. If the pockets are too deep, the chain may jam with a corresponding failure of engagement between chain and sprocket or sheave.
- Check for evidence of excessive load brake wear.
   Inspect clearance between brake components and adjust if needed.
- Check for evidence of pitting or other deterioration of visible controller contacts.
- 8. Check for evidence of deterioration of supporting structures and trolleys.
- 9. Check for visible deformation of limit switch coil springs.
- 10. Check that all warning labels are present and readable.

#### **INSPECTION PROCEDURES: ALLOWABLE LIMITS**

#### **Load Chain**

Carefully inspect the entire load chain. Measure five consecutive links with calipers in the manner shown in Figure 20. Check every three feet and especially where excessive wear is indicated. Any load chain that shows noticeable deformation or heat influence must be replaced with a new one. Never extend load chain by welding a second piece to the original.

Capacity	Load Chain	5 Links Normal	5 Links Limit
1/2 ton	6.3 x 19 mm	3.74"	3.8"
1 ton	8 x 24 mm	4.72"	4.79"
2 ton	8 x 24 mm	4.72"	4.79"
3 ton	8 x 24 mm	4.72"	4.79"
5 ton	8 x 24 mm	4.72"	4.79"

Figure 20

#### **Hooks (Top and Bottom)**

Replace the hook when the "A" or "B" measurement, as shown in Figure 21, reaches the limit shown in the tables below. Never heat treat the hook or attach anything to the hook by welding.

**NOTE:** Excessive hook throat opening or twist indicates abuse or overloading of the hoist. If such deformation is discovered, inspect the hoist, chain and all supporting members very carefully for additional indications of excessive hoist loading.

Throat — "A"

Capacity	A — Normal	A — Limit
1/2 ton	1.26"	1.386"
1 ton	1.42"	1.562"
2 ton	1.73"	1.903"
3 ton	1.73"	1.903"
5 ton	1.97"	2.167"

Capacity	B — Normal	B — Limit
1/2 ton	1"	under 0.9"
1 ton	1.15"	under 1.035"
2 ton	1.56"	under 1.404"
3 ton	1.56"	under 1.404"
5 ton	1.78"	under 1.602"

Figure 21

#### **Brake Friction Pad**

See Figure 22.

Before suspecting or replacing the brake friction pad, make sure the brake and the safety clutch have both been adjusted properly according to the instructions on pages 13 and 16.

If the friction pad is suspect, measure its thickness using a caliper. If it is under the thickness limit, replace it according to the chart below.

Capacity	Thickness Normal	Thickness Limit (replace)
1/2 ton	0.51"	under 0.48"
1 ton		
2 ton	0.59"	under 0.55"
3 ton	0.59	under 0.55
5 ton		

Figure 22

**AWARNING** Do not attempt to rebuild a worn friction pad and do not modify brake system in order to use a worn-out pad.

#### CHAIN CONTAINER CHART FOR STANDARD OR CUSTOM LIFTS

	Hoist		Lift (m/ft)																
Description	Model	3 m (10')	4 m (13')	5 m (16')	6 m (20')	7 m (23')	8 m (26')	9 m (30')	10 m (33')	11 m (36')	12 m (40')	13 m (43')	14 m (46')	15 m (49')	16 m (53')	17 m (56')	18 m (59')	19 m (63')	20 m (66')

D = Chain Container part no. PZG-JEH3-63

E = Chain Container (special order) PZG-JEH-63D

### **TROUBLESHOOTING**

Trouble	Probable Cause	Remedy			
Motor will not run.	No incoming power, or low voltage.	Check hoist connections to power source. If low voltage, have a certified electrician check incoming power.			
	Fuse blown or circuit breaker tripped.	Replace fuse/reset circuit breaker.			
	Rectifier damaged in the phase protector so the brake won't work.	Replace phase protector.			
	Transformer damaged.	Replace transformer.			
	Motor damaged.	Have motor replaced by a qualified service technician.			
Hoist lifts but will not lower.	Broken conductor in pendant cord.	Test continuity of each conductor. Replace cable if needed.			
	Up/down switch malfunctioning.	Repair or replace switch.			
Hoist lowers but will not lift.	Overloaded.	Reduce load to within hoist capacity.			
	Up/down switch malfunctioning.	Repair or replace switch.			
	Clutch malfunction.	Have clutch replaced by qualified personnel.			
Load continues drifting down excessively when	Grease or oil on the lining.	Open the hoist, disassemble the brake and clean the lining.			
hoist is stopped.	Disc brake is worn.	Adjust clearance between armature and iron core. See page 16.			
	Brake springs are damaged.	Replace brake springs.			
Hoist moves in wrong direction.	Two of the three power supply wires are switched.	Switch any two of the three supply wires (see pages 9 and10).			
Motor overheats.	Excessive load or too frequent use.	Operate within rated load and according to duty cycle rating.			
	Brake drags.	Adjust brake clearance (see page 16).			
Poor engagement of chain with sprocket/sheave.	Load chain is seriously worn.	Replace load chain. See pages 12, 13, 14, and 15.			
	Sprocket wheel, sheave or chain guide is seriously worn.	Replace parts as needed.			
Will not lift rated load.	Overload limit clutch friction torque too low.	Readjust the overload clutch to proper limits (qualified personnel only).			
	Overload limit clutch damaged.	Replace overload limit clutch.			
Limit switch failure.	Bad connection of limit switch leads.	Inspect the contacts of the leads and limit switches.			
	Limit switch damaged.	Replace limit switch.
