

Salt Expert eQuilibrium Chlorinator System

Chlorination with Artificial Intelligence

4 sizes to suit all pools

3 models to suit all budgets

Upgrade from semi automatic pH control through to full chlorine and pH sensing and control

Increase your profits using Mineralools (mineral enriched salt)

NOVEDAD
2014

Dealer:

Salt Expert equilibrium Range

SaltExpert eQuilibrium chlorinators provide a full range of options for minimising or eliminating the pH balance in pool water. This dramatically reduces manual water testing, maintenance or corrective actions required for your pool water.

The chlorinator can even test, monitor and maintain the perfect level of disinfectant and pH balance to keep your pool safe, healthy and looking great.

Technical aspects

eQuilibrium Chlorinator Systems all incorporate switch mode power supplies to provide high efficiency DC power to the electrode. This helps produce the maximum sanitiser output.

High quality electrode life is enhanced by the intelligent polarity reversal. Rather than reverse automatically at fixed intervals, the **eQuilibrium**.

Chlorinator accounts for the sanitiser output setting and will reduce polarity reversals to significantly extend electrode life.

LCD screen

The large LCD screen on the controller provides meaningful information such as the chlorine level, the output level of the cell, the pH setpoint and the actual water balance. It even records the total number of hours in operation, the maximum chlorine level recorded and the lowest/highest pH levels recorded.

pH and chlorine sensors

The sensors have built-in amplifiers and are optically connected, which prevents electrical interference from storms and other sources. This gives more accurate pH and chlorine readings. The device gradually adds the exact pH setpoint so that the ideal pH is attained as it is able to detect the amount required.

Mineral enriched salt

Mineralpools is a mineral enriched salt that delivers two benefits in a single product: besides taking care of your pool's disinfection, it takes care of your body and soul.

Discover a pool odorless, tasteless and forget sore eyes.

The electrolysis system disinfects the pool naturally from the salt dissolved in the water.

If you add to that the therapeutic benefits of MineralPools, enjoy pure and healthy water.

Salt Expert eQuilibrium 2

Incorporating all the functions of the eQuilibrium pH test kit, the eQuilibrium 2 has an pH sensor to maintain the perfect pH level. Different pool surfaces have different ideal pH levels.

- Your pH is sensed every 15 minutes and the appropriate measure of pH adjuster is accurately dosed by the inbuilt peristaltic pump.
- Simply replenish your pH adjuster once a month or even longer and let eQuilibrium 2 sanitise and balance your pool water pH.

Salt Expert eQuilibrium 3

Further add the chlorine sensor kit to automatically control pH levels in the pool. You will be able to automatically monitor the chlorine output levels from the readings made by the device.

Correct pH and chlorine create perfect swimming conditions, help protect pool shell, interior finish and pool equipment.
