

Ctx391.0 MULTI ACTION 10 250g

Multi-action chlorine treatment for pool maintenance

- Slow and continuous dissolution.
- Disinfection, antialgae, algistatic, flocculant, coagulant, chlorine stabilizer, antical, metal scavenger, corrosion protector, pH reducer.

TABLET	EFFICACY	ALL TYPES OF POOLS	DOSAGE
250g	WEEKLY		1 /25m ³

PROPERTIES

Appearance	Solid in 250g tablets
Colour	White and blue
pH (1%)	2,5 - 3

CHARACTERISTICS

Solid compound in tablets, especially formulated to eliminate, in just one application, bacteria, viruses and micro-organisms in general. It also prevents algae from growing, keeps the water crystal clear and avoids limescale incrustations.

Product suitable for disinfection of swimming pools made with ceramic materials. Avoid prolonged contact of this product on swimming pools surfaces made with polyester, vinyl or liner. This product could discolour these surfaces.

INSTRUCTIONS FOR USE

Put the necessary dose in the skimmers; secondly, put the filtration equipment into operation. The product, once water runs through the skimmers, will be dissolved.

It is essential that the whole amount of the swimming-pool water is purified daily.

The residual chlorine must range from 0.5 to 2 mg/l. This value can be easily measured by the test kits at least twice a day.

DOSAGE

Initial treatment: Add 15grs. of ClorShock for m3 of water. Wait for two hours before adjusting the pH level between 7,2 and 7,6 using either ctx10 pH Minus solid or ctx20 pH Plus solid.

The initial treatment will have to be repeated whenever you notice a lack of transparency in the water.

MAINTENANCE 2 DISINFECTION

Maintenance treatment: Once we have the adjusted water pH, add a ctx391.0 Multi Action 10 for 25m³ of water every 7 or 10 days.

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.
