

## ctx300 CLORLENT

### Chlorine treatment for disinfecting the pool

- Essential for ongoing pool treatment since the disinfectant is released as the water needs it.
- Stable chlorine, lasts longer in water.
- Suitable for shock treatments and general maintenance.

POWDER	EFFICACY	ALL TYPES OF POOLS	DOSAGE
	DAILY		10g /10m <sup>3</sup>

### PROPERTIES

Appearance	Powder
Colour	White
Available chlorine	90%
pH (1%)	2 - 3
Moisture	0,30%
Solubility at 20°C	1,2 grs / 100 ml

### CHARACTERISTICS

Slow-dissolving organic compound, stabilized, for the treatment of pool water.

### INSTRUCTIONS FOR USE

Always adjust the pH before adding chlorine to the water, to make it as effective as possible.

Introduce the necessary dose of product inside the skimmers and then turn on the filter equipment; in this way the product will dissolve when it begins to move through the skimmers.

It is also possible to pour the dose of product equally over the surface of the swimming pool, preferably during the evening and when there are no swimmers in the pool.

The level of free residual chlorine should be between 0,5 – 2 mg/l. This level is easily determined using a chlorine and pH test kit, and should be measured at least twice daily.

### DOSAGE

**Initial Treatment:** Add 10 grs. of product for m<sup>3</sup> of water. Wait for two hours before adjusting the pH level between 7,2 – 7,6 using either Solid pH Reducer or Solid pH Enhancer.

The Initial treatment should be repeated whenever the water does not appear transparent.

**Maintenance Treatment:** Once the pH level of the water has been adjusted, add 1 or 2 grams of product for m3 of water daily.

This dose is merely meant as a guideline and may be modified according to differing characteristics of the pool or climate.
