

ctx230 DOSILONG

Floating dosing device for multi-action treatment for pool maintenance

- Ensures ongoing and constant dosing, keeping the water disinfected and promoting an algacide and flocculant action.
- Specially designed for pools with skimmer.
- Easy to use, no product handling.

FLOATING BUOY	EFFICACY	ALL, SPECIAL WITHOUT SKIMMER	DOSAGE
	3-4 WEEKS	 	1 BUOY /50m ³

PROPERTIES

Appearance	Bell-shaped vase with perforable marks
Colour	White
Weight	1,75 Kg

CHARACTERISTICS

Dispenser which contains disinfectant products, flocculants and algacides for the maintenance of the swimming pool water.

This dispenser prevents water from algae and maintains the pool water clear and transparent.

INSTRUCTIONS FOR USE

Punch the circular marks (on both sides) from 50 m³ to 200 m³ of water depending on the swimming pool volume. Punch a hole in the round marks with a sharp object (for instance a scissors) and you will easily obtain the necessary holes for water to get inside it.

Attention: Don't refill this dispenser. It is for one use only.

DOSAGE

Initial Treatment: Add 15gr of Clorshock for each m³ of water. Wait for two hours before adjusting the pH level between 7,2 - 7,6 using either ctx 10 pH Minus solid or ctx 20 pH Plus solid.

The initial treatment should be repeated whenever the water does not appear transparent.

Maintenance treatment: Put the dispenser into the water and let it float.

Maintain a residual chlorine concentration between 0.5-2 ppm.

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.
