

# PIPEWORK CLEANER

Compound specially formulated to remove the biofilm that get accumulated in the circuits (pipes) of spas and hot tubs.

## PROPERTIES

Appearance	Liquid
Colour	Colourless
Density	0.90-0.98 g/cm <sup>3</sup>
pH	10-11

## DOSAGE AND INSTRUCTIONS FOR USE

Fill the spa or hot tub with water up to 5-10 cm above the jet nozzles. You can use the same bathwater. Add half a bottle (500 ml) of Biofilm Cleaner to eliminate the biofilm from spas or hot tubs ranging from 1.000-3.000 litres. Remove the filter cartridges before starting the cleaning process and activate both the filtration and massage pump for about 30 minutes.

Once the cleaning process is complete, the spa or hot tub should be emptied, and then refilled with clean water for rinsing, activating both pumps (filtration and massage) for 1-2 minutes. After this time, empty the tub again. Finally, reinsert the cartridge (new or clean) into the filter and fill it with clean water containing disinfectant (chlorine or bromine).

Bathing during the cleaning process is prohibited.

A spa or hot tub should be cleaned approximately 3-4 times a year.
