

## ctx-922 GRANULATE CHLORINE

Compuesto orgánico de disolución rápida, altamente estabilizado, para el tratamiento del agua en el SPA.

### PROPERTIES

Appearance	Granular solid
Colour	White
Active chlorine content	min. 55%
pH (1%)	6.5 ± 1.0
Solubility at 20°C	28 g/100 ml

### CHARACTERISTICS

- Owing to its high solubility in water, the required quantity of residual chlorine is rapidly obtained.
- The free residual chlorine obtained in the water offers higher stability against ultraviolet light.
- Does not modify the pH of the water.

### DOSAGE

**Initial treatment:** Add 15 g of product for each m<sup>3</sup> of water. After 2 hours, fix the water pH between 7.2-7.6 using pH Minus granulated or pH Plus granulated.

The initial treatment will have to be repeated whenever you notice a lack of transparency in the water.

**Maintenance treatment:** Once the pH level of the water has been adjusted, add from 1 to 3 g of product per m<sup>3</sup> of water daily.

This dose is merely meant as a guideline and may be modified according to differing characteristics of the spa or climate.

## INSTRUCTIONS FOR USE

Adjust the pH correctly before applying any product to maximize its effectiveness.

Introduce the necessary dose of product inside the skimmers and then turn on the filter equipment; in this way the product will dissolve when it begins to move through the skimmers.

It is also possible to pour the dose of product equally over the surface of the spa, preferably during the evening and when there are no bathers in the spa.

The level of free residual chlorine should be between 0.5-2 mg/l. This level is easily determined using a chlorine and pH test, and should be measured at least twice daily.
