

ctx391 MULTI ACTION 10 250G

Multi-action chlorine treatment for pool maintenance

- Slow and continuous dissolution.
- Disinfection, anti-algae, algicidal, flocculant, coagulant, chlorine stabilizer, anticorrosive, metal scavenger, corrosion protector, pH reducer.

TABLET	EFFICACY	ALL TYPES OF POOLS	DOSAGE
250g	WEEKLY		1 /25m ³

PROPERTIES

Appearance	Solid in tablets (250g)
Colour	White and blue
pH (1%)	2,5 - 3

CHARACTERISTICS

Solid compound in bars, specially formulated to eliminate, in just one application, bacteria, virus and micro-organisms in general. It also prevents algae from growing, keeps the water crystal clear and avoids lime incrustations.

This product must not come into direct contact with swimming-pools made with polyester and vinyl or the well-painted ones because it can cause discolorations.

INSTRUCTIONS FOR USE

Put the necessary dose in the skimmers; secondly, put the filtration equipment into operation. The product, once water runs through the skimmers, will be dissolved.

It is essential that the whole amount of the swimming-pool water is purified daily.

The residual chlorine must range from 0.5 to 2 mg/l. This value can be easily measured by the test kits at least twice a day.

DOSAGE

Initial treatment: Add 15 grs. of ClorShock for m³ of water. Wait for two hours before adjusting the pH level between 7,2 - 7,6 using either ctx 10 pH Minus solid or ctx 20 pH Plus solid.

The initial treatment will have to be repeated whenever you notice a lack of transparency in the water.

Maintenance treatment: Once we have the adjusted water pH, add a ctx391 multi action 10 for 25 m³ of water every 7 or 10 days.

MAINTENANCE 2 DISINFECTION

These doses are the ones suggested and can be modified according to the own characteristics of every swimming pool, climate, etc.
