RENOLIT AlkorPlan2000/3000
Reinforced Membrane for swimming pool liners

Make your
swimming
pool
fashionable

The most used, reinforced swimming pool membrane in the world

The system with least problems and most advantages on the market.

Due to its great aesthetic appeal; easy and economic method of installation; and its 10 years watertight guarantee, AlkorPlan is being installed worldwide—thus making it the most popular and most used pool-lining system..

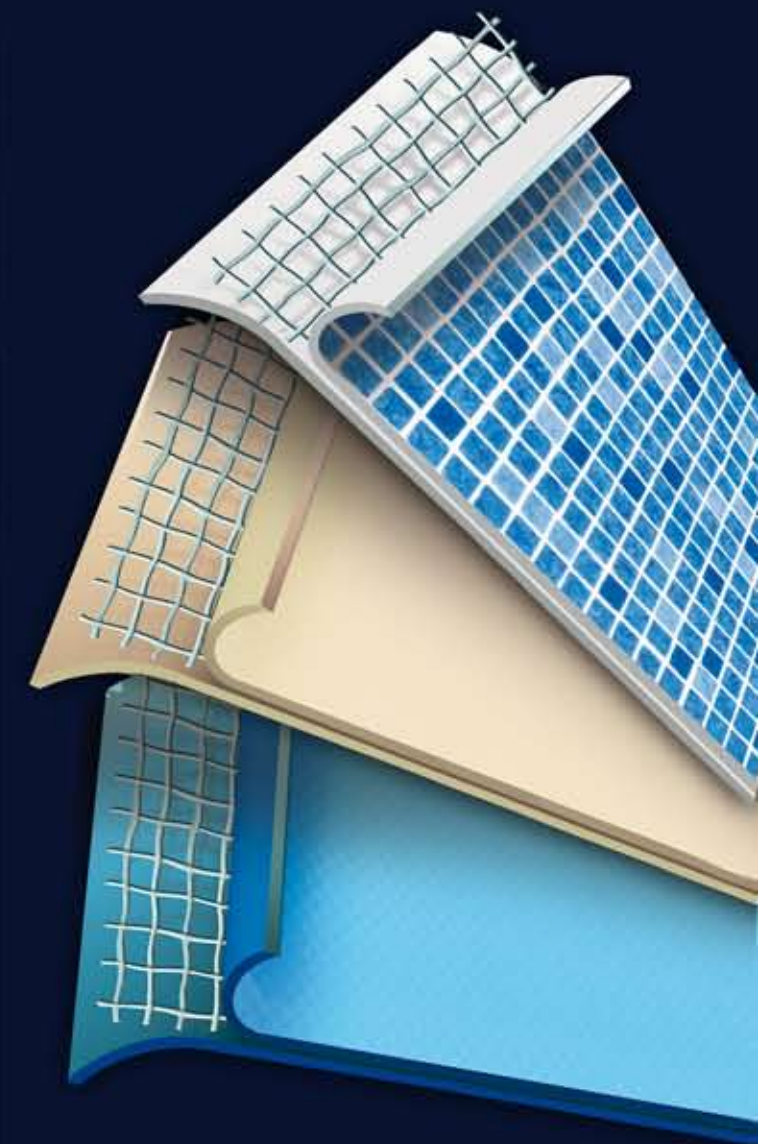

AlkorPlan2000/3000 are high range swimming pool reinforced membranes, which thanks to the application of a protective lacquer, of a unique and innovative formulation has meant that the RENOLIT membrane has become the highest quality available on the market due to its strength, beauty and the RENOLIT guarantee.

What is a reinforced membrane?

It is a sandwich of 2 layers of plasticised polyvinyl chloride (PVC-P) laminated either side of a polyester mesh. This provides 100% watertightness in the pool, guaranteed for 10 years.

Why is it reinforced?

The polyester mesh provides a high level of dimensional stability, high tensile strength and puncture resistance without affecting the flexibility of the foil. The flexibility makes it the ideal liner for waterproofing pools with irregular or complex shapes.

How is it installed?

It can be installed on any clean surface, quickly and with minimum building works, making it an ideal system for renovating existing swimming pools whatever their original material...

The joining of membranes previously overlapped is achieved by heat therefore obtaining a perfect thermo fusion, two membranes become one with no possibility of leakage.

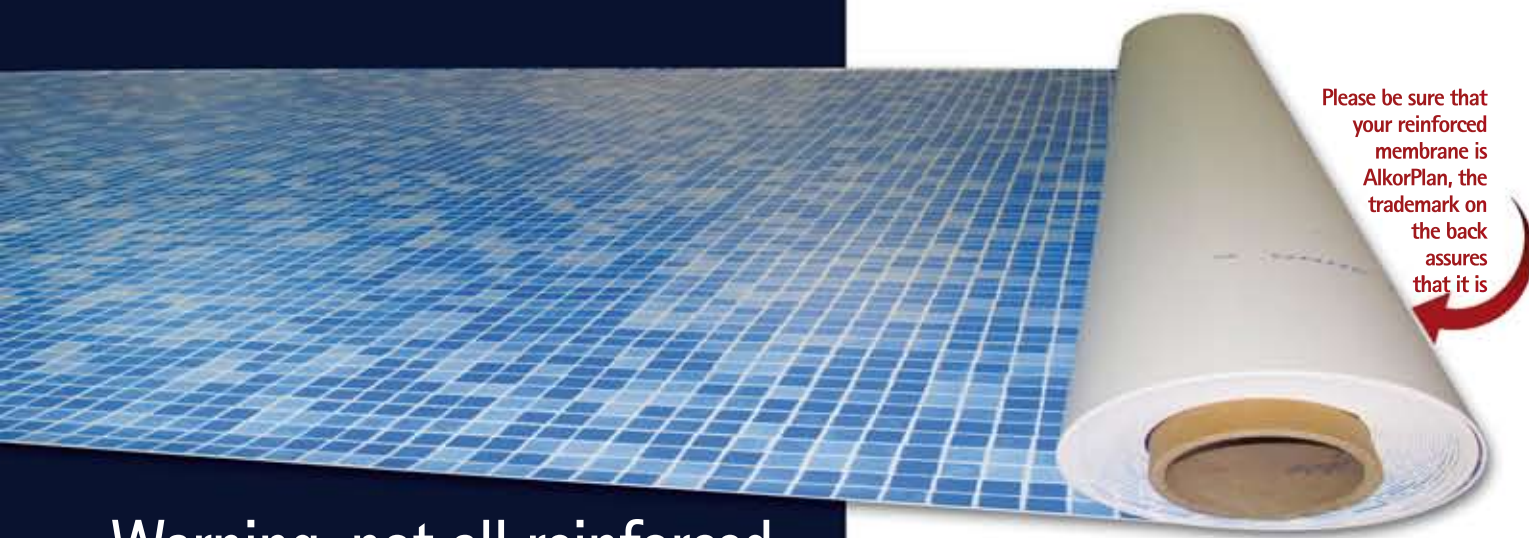

The RENOLIT Academy

RENOLIT holds training courses over 2 days at their training centres in major European countries such as Spain, France, Germany, Belgium and Italy.

It also offers the possibility of ON SITE training. This provides the appropriate direction and guidance for the installation of AlkorPlan reinforced membranes.

Qualified RENOLIT installers guarantee perfection in the installation and finishing of a swimming pool.

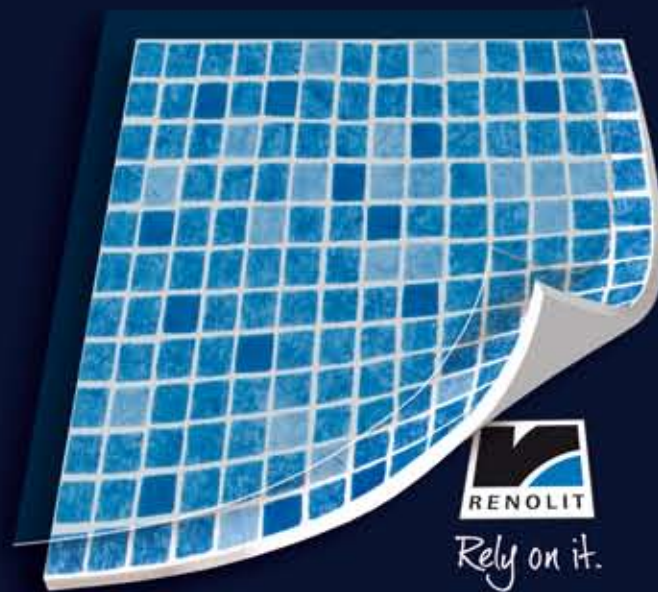

Please be sure that your reinforced membrane is AlkorPlan, the trademark on the back assures that it is

Warning, not all reinforced membranes are produced the same way!

AlkorPlan is manufactured using the finest virgin raw materials which insure strength and durability. RENOLIT uses the same raw materials and formulation for both AlkorPlan1000/2000/3000.

What makes AlkorPlan different... the secret is in the lacquer

In addition, AlkorPlan2000/3000 are the only membranes on the market using a special lacquer formulation which prolongs the life of the membrane. Insuring protection against premature ageing, scuffs, scratches, dirt, bacteria and ultra-violet rays.

Benefits of the lacquer

WITH LACQUER

It repels dirt and stains and makes cleaning the membrane easy.

WITHOUT LACQUER

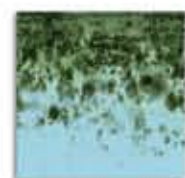

Protects the membrane from UV rays and prevents premature ageing.

Acts as a shield against scuffs and scratches resulting from continuous use.

Prevents the growth of bacteria and fungi therefore making the swimming pool a

*Extreme stress testing carried out in the laboratory.

AlkorPlan Product range

RENOLIT offers different product lines depending on different tastes and needs, such as colour, design and finish. Never losing the highest level of quality.
