

CLARIFYER

A polymer flocculant with great coagulating and flocculating properties. Capable of removing particles in suspension found in spa water.

PROPERTIES

Appearance	Liquid
Colour	Colourless
Apparent density	1.16-1.26 g/cm ³
pH of a 1% water solution	3.5-4.5

CHARACTERISTICS

Product with great capacity to eliminate metal ions such as iron and magnesium, as well as the tiniest particles found in spa water and that the filtration equipment cannot retain due to their minimum size.

Improves the bacteriological quality of the water and so reduces the consumption of disinfection products.

DOSAGE

Recovery treatment: Add 10 ml of product for each m³ of water (1 cap = 15 ml).

Maintenance treatment: This can be carried out by means of a metering pump, injecting 15 ml of product for m³ of circulating water prior to the filter (1 cap = 15 ml).

These doses are the ones suggested and can be modified according to the own characteristics of every spa, climate, etc.

INSTRUCTIONS FOR USE

Ensure the filtration equipment is switched off and the spa empty of bathers before pouring the necessary dose of product in a container with water and distributing evenly over the spa water surface. After 8 hours, eliminate the flocs formed and deposited on the bottom of the spa with a pool cleaner.
