

HIGH-TEMP MOLY EP MULTI-PURPOSE GREASE

EXTREME PRESSURE GREASE WITH MOLYBDENUM SOLIDS

• Heavy-Duty Automotive, Off-Road & Industrial • Lithium Complex Grease

DESCRIPTION:

PEAK High-Temp Moly EP Multi-Purpose Grease with molybdenum solids is for severe-duty, extreme pressure applications under high shock loads. Superior anti-seize, anti-wear performance grease.

APPLICATIONS:

- Automotive - recommended for Ford, Lincoln, Mercury and Mack HD chassis and wheel bearings.
- Off-road & Industrial - recommended for heavy-duty plain and anti-friction bearing applications operating under high stress/high load conditions, coupled with high ambient temperatures.

FEATURES:

- Designed to protect under severe conditions
- 500 Kg Weld Point - For demanding applications
- Premium Oxidation Stability - 120 hr. high temp life

CLASSIFICATIONS:

- Meets, or exceeds, the performance for:
- NLGI/ASTM D-4950 GC-LB
 - ISO 6743-9: L-X CDIB 2
 - DIN 51502: KPF2N-30
 - Ford ESA-M1C75B
 - MACK MG-C

BASE OIL VISCOSITY & NLGI GRADE

Most grease-lubricated applications are element bearings and grease base oil viscosity should be considered in selecting the appropriate grease.

Step 1. Identify bearing type and DN value (speed factor)

DN value equals the bearing's average diameter multiplied by its average operating speed (RPM) and applies a correction factor based on type of bearing. Consult equipment manufacturer if DN value is unknown.

Step 2. Determine average bearing operating temperature

Step 3. Look up the DN value and operating temperature in the appropriate charts above to determine optimal grease base oil viscosity and NLGI grade.

GREASE THICKENER COMPATIBILITY

Use this chart to determine compatibility if changing from one type of grease thickener to another. A complete application purge may be necessary. Follow equipment manufacturer's lubricant recommendations.
