

ALIS compatible wrench

Ingersoll QX Wrench

Next-Generation Airfield Lighting
Smart Assembly (Torque) Tool for Airside

Keeping your airfield ground lighting assets in a good maintained condition works best when the registration happens in a digital method and as direct as possible to the asset. ALIS provides the tools and apps to facilitate this in easy way and suits the unique conditions we encounter airside. From a few registrations to thousands, ALIS scales to your needs in order to keep your runway in the best operational state. The Ingersoll QX wrenches elevates data registration of fixation inspections to another level in ease of use and is able to optimize your maintenance regime.

Not just torque control but total control.

The innovative QX Series is a revolutionary step for your airfield, one that shows how a smarter tool can improve process control, operator comfort and data communication ensuring a high- quality installation of your airfield lighting fixation.

Maintenance Insights

The patented closed-loop transducer control at the heart of the tool delivers precise torque and accurate, traceable results— The rotation of the bolt is recorded during the torque action and provides insights of the condition of the bolt before(!) it was torqued. This allows for optimisations in your maintenance regime to reduce risk and increase resource efficiency.

Control

- The QX Series tool is user-programmable in torque, angle and speed through the accompanying – INSIGHT Connect app.

Comfort

- Compact, lightweight, and ergonomically balanced so the operator can work without restraints.
- Compatible with the ALIS Carbon fibre 1m extension bar for torque.

Communication

- Bluetooth LE connectivity
- ALIS mobile app compatible
- Easy programming with the insight connected app.
- Fixation status data collection - understanding bolt fixation from before/after it was torqued/inspected

ft-lbs (nm)	rpm	lbs (kg)	in (mm)	in (mm)	Voltage	in	Communication
8.80-59.0 (12.0-80)	375	5.0 (2.27)	23.07 (586.1)	.85 (21.6)	40V	1/2	Wireless Enabled

Batteries

The new QX Series IQV40 high torque tools utilize the BL4011 40V battery for increased torque and runtime.

Bluetooth connectivity

All ALIS-compatible torque wrenches are equipped with a Bluetooth® low energy module for seamless integration of the wrench with the ALIS on-site Apps. The values registered by the torque are used to validate individual asset Torque actions required tasks and provide direct auditable information.

Ergonomic extension bar

The super light-weight extension bar allows more ergonomic stand-up torquing which results in a lower level of effort and more accurate torque actions. They are made from carbon fibre and winded especially to be rigid for torque, rated up to 100 Nm. The bar allows for 1/2" Sockets and can be used for M10 or for the US-standard 3/8" – 16 UNC hex bolts.
