

SAFETY INFORMATION

WARNING! These gloves are designed to protect your hands during use with fireplaces, barbecues, ovens, and campfires. Made from flame-retardant material. Constructed with industrial-grade quality materials to protect against heat exposure up to 350°C (662°F). These gloves will become hot when in contact with heated surfaces. Use with caution to avoid burns. Allow the gloves to cool between uses. Open flames and intense heat are always dangerous – take all possible precautions. Do not use these gloves when wet, as they may transfer heat more quickly and cause burns. These gloves provide limited heat protection and should not be used for extended contact with hot items. Keep the gloves away from open flames. The gloves do not protect against sharp objects.

IMPORTANT: The protection described is only valid for new gloves that have not been washed or regenerated. Performance levels are based on tests conducted under applicable standards. For gloves with multiple layers, performance levels apply to the entire glove.

INSPECTION: Always inspect gloves before each use for tears, holes, or damage. Replace if damaged. Follow care instructions to maintain protection. Only intact gloves provide safe handling and a secure grip.
