

# Tower Magnetic Wall Knife Rack

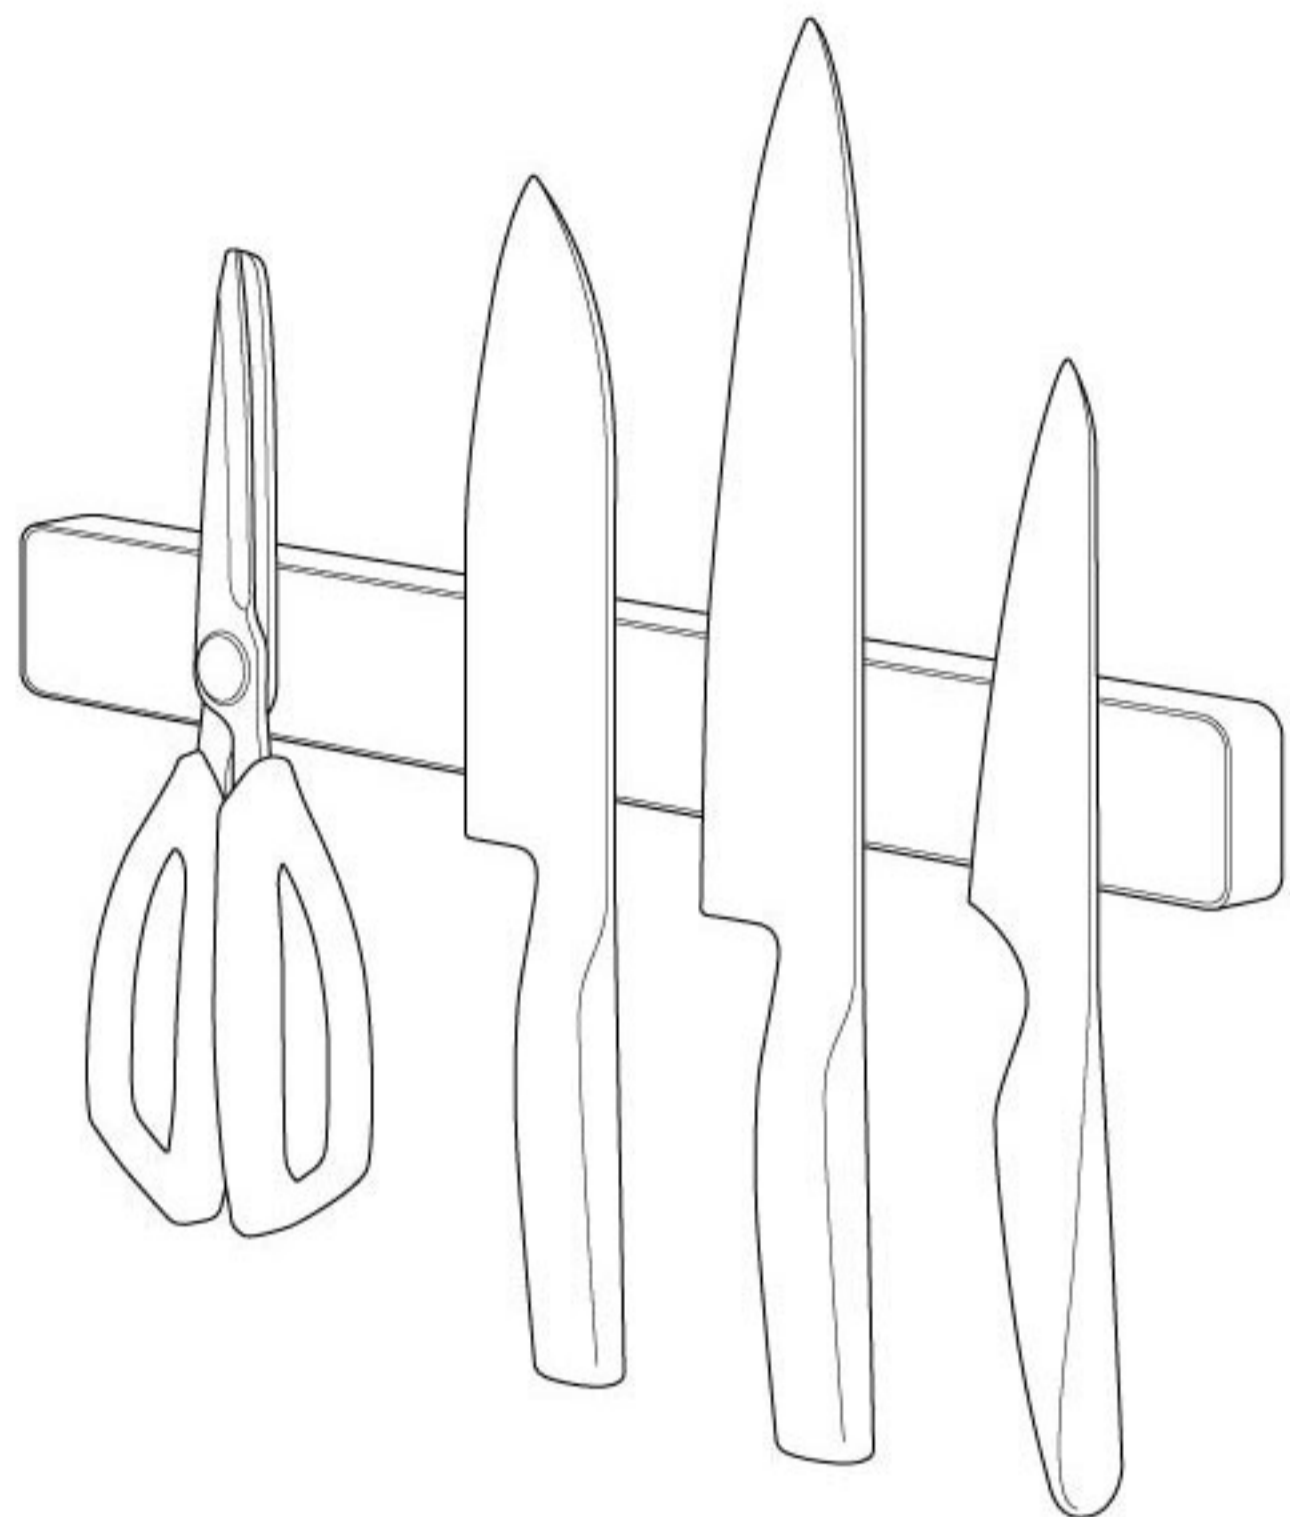

INSTRUCTIONS Thank you for purchasing this item from Yamazaki Inc. Please refer to the following instructions before using the product. Please use it properly, and take good care of it.

**Warning** It is highly dangerous to place the magnetic surface close to an electronic medical device such as a pacemaker, as it may impair its operation. Please note that if the product is placed close to electronic devices or magnetic media (PCs, smartphones, magnetic cards), it may become unusable due to data corruption or magnetization.

## How to attach with magnet

Please attach the product horizontally to a wall that can hold magnets.

\*Do not attach to a wall that will be opened or closed, such as a door, or to any surface subject to movement or vibration.  
\*Please attach the product in a safe position where it will not cause injury in case a knife falls.  
\*Do not attach or use the product vertically.

As shown in the diagram, knives should be stored vertically with the heaviest part, the handle, facing downward.

\*Please be careful not to fall or injure yourself when attaching or detaching knives.  
\*Do not stack knives together when storing them or attach them by the cutting end.  
\*Do not store wet items.

### X Unusable wall types

Walls that do not use tiles, wood, walls with large protrusions, glass, steel plates, or walls that open and close like doors, and movable or non-fixed walls.

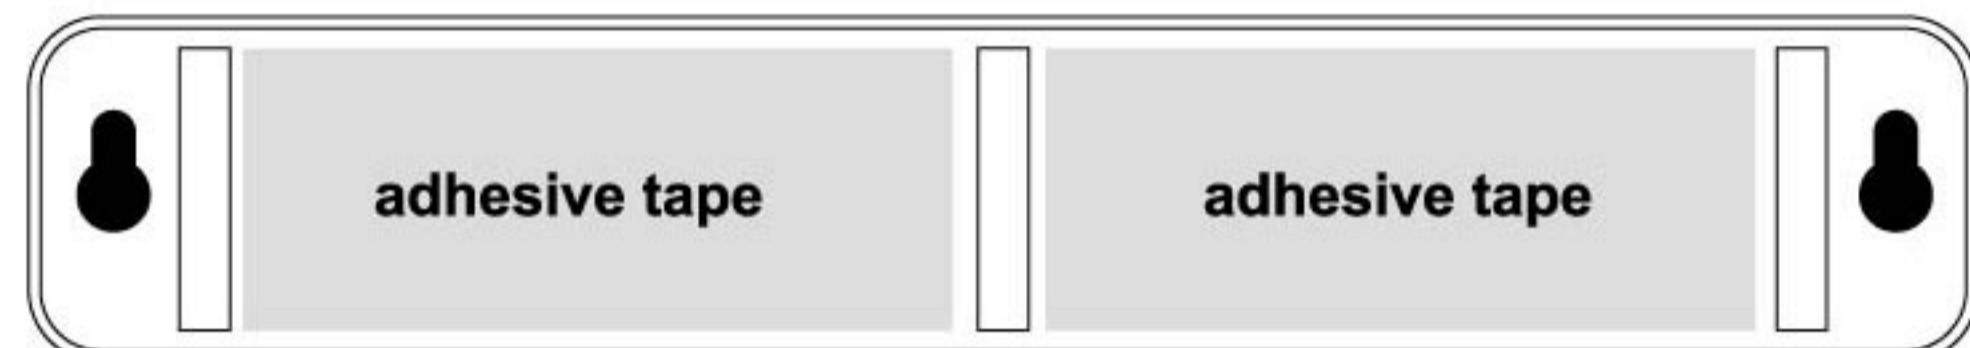

## How to attach with adhesive tape

① Carefully wipe off any dirt, water spots, moisture, oil, etc. from the back surface of the main unit and the mounting surface where the adhesive will be applied, and then dry well.

\*Please be sure to clean and dry the mounting surface before using the product.

② Peel off only one side of the protective sticker attached to the adhesive. Stick it on the back side of the main unit in the position shown in the diagram, and press it firmly to release air.

\*Remove the protective sticker without touching the adhesive surface with your hands.

③ Peel off the protective seal on the other side and attach it horizontally to the wall where it will be mounted. Press down firmly for about 3 seconds to release air and ensure a strong adhesion.

\*After installing the product, please allow 24 hours for the product to settle before using.  
\*When removing the product, some sticker marks may remain or the paint may peel off.  
\*The adhesion strength will be reduced if the product is reapplied or if the adhesive surface is touched by hand.  
\*It is difficult to adhere when the temperature is lower than 10°C.  
It is recommended to attach the tape when the temperature is higher than 10°C. If the temperature is lower than 10°C, warm the tape and the adhesive surface with a hair dryer.  
\*When removing the product from the wall, use a cutter knife or similar tool to cut the tape.  
Please be careful not to cut your hands or fingers when removing the product from the wall.  
In addition, please be careful not to scratch the wall or other surfaces.

### O Mountable wall types (glossy, flat surface)

Flat surfaces, tiles, stainless steel, plastic surfaces, painted metal surfaces, and decorative plywood that are larger than the adhesive surface of the product

### X Non-mountable wall types

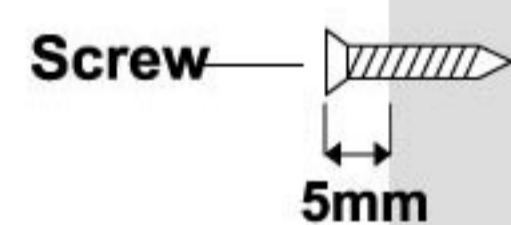

Surfaces smaller than the product's adhesive surface, earthen walls, plaster, mortar, concrete, frosted glass, textured surfaces, rough surfaces, curved surfaces, printed plywood, surfaces with patterns, wallpaper and other cloth surfaces (vinyl chloride resin, fabric, paper), surfaces treated with fluorine or mildew-proofing, surfaces subject to high temperatures such as microwave ovens and stoves, walls that open and close such as doors, and walls that can be moved and are not fixed in place.

## How to attach with screws

\*Please prepare a Phillips screwdriver.

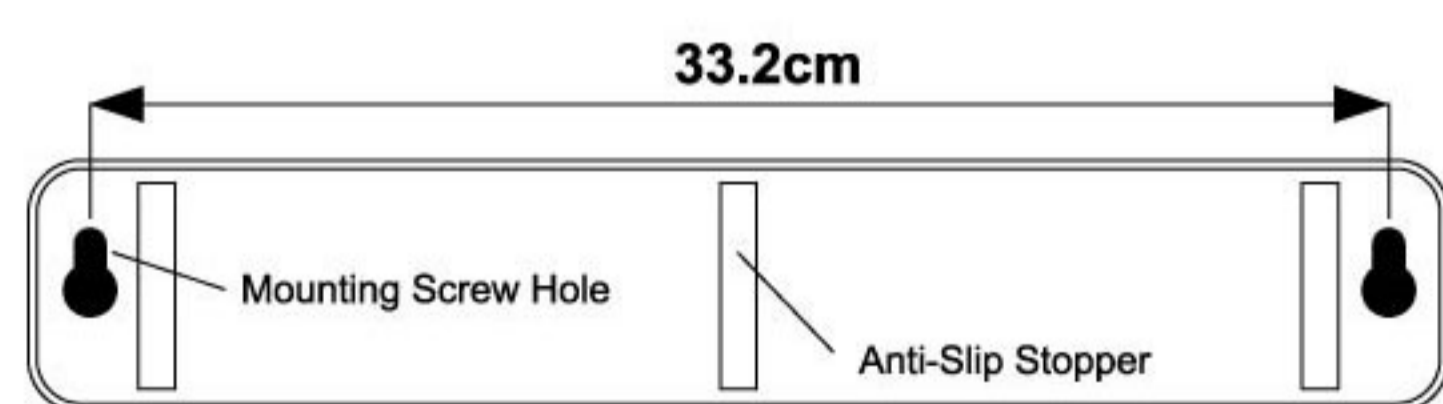

\*If screws are used, a hole of about 3 mm in diameter will be drilled in the wall. Please attach it in a location where a hole will not be a concern.  
\*Do not use an electric screwdriver for mounting as it may cause damage to the screws.  
\*The wall to which the product is to be installed must be at least 10 mm thick for veneer board.  
It cannot be installed on a wall with a hollow structure with a 3 mm veneer board in between.  
\*When mounting, please attach it in a place where the screws can be used.

② Screw two screws into the pilot holes, leaving the screw heads protruding 5 mm.

③ Insert the head of the screw into the fixing screw hole of the main unit and slide it downward to fix it firmly in place.

\*If the product wobbles or is loosely fixed after installation on the wall, adjust the tightness of the screws until it is firmly fixed in place.  
\*If the installation part becomes unstable, reinstall it in a different location.  
\*When removing knives, etc., do not lift them upward. This might cause the product to come off the wall, potentially resulting in damage or injury.

### O Mountable wall types (glossy, flat surface)

Plank walls, pillars, and printed plywood (where studs can be found)

### X Non-mountable wall types

\*Do not use on brittle walls such as gypsum board, plaster, mortar, etc., panels thinner than 10 mm, concrete, hard walls such as steel, block brick, etc., tiles, tile joints, walls that open and close such as doors, and walls that can be moved and are not fixed in place.

## Precautions for use

Please be aware that all of the following can cause falls or injury as well as damage, deformation, rust, or deterioration of the contact surface.

- Please do not use the product in any other way than its intended use.
- The product should be attached to a flat, even surface where magnets can be attached.
- Post-installation, please confirm that the product is securely affixed to the wall prior to use.
- When moving the product, avoid rubbing or scratching the product or the surface on which it will be placed.
- Liquids used for sterilization that are high in acidity or alkalinity, alcohols, oils, nail polish removers, perfumes, medical soaps, strong adhesives, liquids with granular materials, terpenes and oils found in citrus fruits, etc. may cause damage to the product, so please avoid using them.
- When placing something on the shelf, please balance the load so that it is not unevenly distributed.
- Do not move the product with anything placed on top of it.
- Depending on their size and shape, some items cannot be placed on the shelf.
- Do not place sharp, unstable, or valuable items on the shelf.
- Do not store anything that exceeds the load capacity.
- Even within the weight limit, a large impact can cause the product to fall, causing injury or damage, so please exercise caution.
- The weight limit and adhesive strength may slightly vary depending on the surface finish, material, condition, coating, strength, or environment.
- We cannot be held responsible for damages caused by uncontrollable events such as natural disasters or incorrect usage, or installation.
- Do not place this product in direct sunlight, proximity to fire, or high temperatures.
- Please install the product in an area out of reach of young children.

## How to clean

- If the surface is heavily soiled, wipe it with a soft cloth dampened with neutral detergent diluted in hot water, blot it with water, and dry it well.
- Please avoid scrubbing with a scouring brush or polishing powder, etc., as this may cause scratches.
- Please do not use chemicals such as thinner or benzene, etc., as they may damage the paint and cause discoloration.
- Regular care is recommended to prevent mold and water stains.
- Please avoid soaking in hot or cold water, alcohol, or bleach.
- Do not clean in a dishwasher, dryer, or with boiling water.
